CAMPUSFLOW

Chapter Four: Implementation - First Draft

Demonstration project - sample academic content

Implemented modules

Student project workspace, lecturer review workspace, topic approval, chapter progress, activity records and notifications.

Document lifecycle

An uploaded document starts pending review. The lecturer may request changes or approve it; a revision is stored as another version.

Draft revision point

This first draft needs a clearer discussion of how version history and private document access work together. The lecturer requests an update in the demonstration.
