CAMPUSFLOW

Project Proposal

Demonstration project - sample academic content

Project topic

CampusFlow: Digital Project Supervision and Progress Tracking

Problem

Fragmented email and paper supervision make it difficult to identify outstanding work, review decisions and approaching deadlines.

Aim

Build a shared workspace where students and supervisors can manage topics, chapter submissions, revisions, feedback and final approval.

Approach

Use role-based authentication, a private document store, five equal chapter milestones and explicit activity-based project health rules.

Expected demonstration

A student submits a chapter. The lecturer reviews it, leaves feedback and sets a revision date. The dashboard updates as chapters are approved.
